

Bush regeneration services

As a landholder you may want to restore native vegetation, attract wildlife, regenerate farmland, control weeds or learn about your local ecosystems: rainforest, coastal, koala habitat or waterways.

Restoring native vegetation and habitat has positive effects on biodiversity and agricultural productivity:

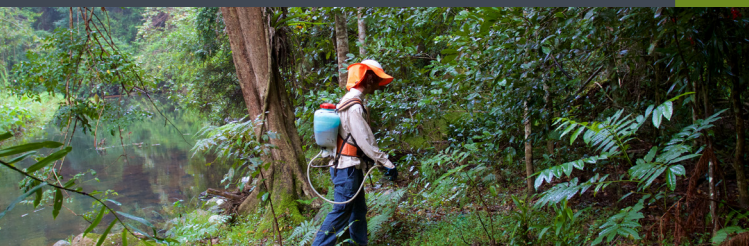

- Reducing erosion and land degradation;
- Reducing heat stress in livestock and creating protective windbreaks;
- Protecting soil and improving soil moisture;
- Providing habitats for native birds and insects that control pests;
- Improving water quality.

Envite Environment is a local, not for profit community based organisation with over 20 years' experience in all aspects of vegetation management including bush regeneration and ecological restoration services.

Services include:

- Control of noxious & environmental weeds, lantana, camphor laurel, coral tree, giant devils fig and others;
- Bush regeneration to restore native vegetation;
- Planting;
- Native landscaping;
- Mapping and property planning;
- Advice on weed control techniques, native plants and weed identification.

For specialised advice or to request a quote, please contact Envite Environment on:
